

BSc (Hons) Computing with Foundation Year Programme Handbook

Published February 2020 V2

Introduction to the Programme

Welcome to the BSc (Hons) Computing with Foundation Year degree programme.

The programme and themed routes are made up of the core modules listed below which are studied across levels three, four, five and six.

Each 20-credit module is equivalent to 200 hours of self-guided learning.

Module Code	Module Title	Credits	Module Type (Core/Option)	Assessment Method						
	Developing Academic Skills	20	С	Portfolio of tasks						
	Using Numeracy, Data & IT	20	С	Portfolio of 2-3 tasks Portfolio including						
	Research Skills and Using	20	с	PowerPoint slides with						
	Information	20	C	speaker notes and a						
				research report						
	Values, Ethics & Working	20	С	Portfolio of 3-4 tasks						
	Collaboratively									
	Structure of Business	20	С	Portfolio of tasks						
	Technology in Organisations	20	С	Portfolio of tasks

BSc (Hons) Computing with Foundation Year

1. Target Award	BSc (Hons)
2. Programme Title	BSc (Hons) Computing with Foundation Year
3. Exit Awards	Foundation Certificate
	Certificate of Higher Education in Computing with Foundation Year
	Diploma of Higher Education in Computing with Foundation Year
	BSc Computing with Foundation Year
4. Programme Leader(s)	Foundation Year: Towella Ngambi
	BSc (Hons): Mohammed Rehman
5. Delivery Model	Online
	Blended Delivery
6. Start date	September 2019
7. Programme Accredited by	
(PSRB or other, if applicable)	
8. UCAS Code (If applicable)	
9. Relevant QAA subject	Computing (2016)
benchmark statement	

10. Programme Aims

The BSc (Hons) Computing with Foundation Year is designed to enable students to achieve an undergraduate honours degree in Computing by undertaking a rigorous study of theories, techniques and issues and acquiring the practical skills that are essential within the changing environment such that they can pursue related careers or further relevant academic study.

The programme is designed to provide opportunities for students to develop their knowledge and skills in computing in a flexible way. Learning materials have been developed which allow students to maximise the time they have available for study and the programme delivery provides additional support through either on-line or structured tutor lead sessions. The curriculum provides a broadbased experience exposing the learner to a range of relevant aspects of computing in a progressive way.

More specifically at Level 3 it will:

- enable learners to confidently identify and use relevant understanding, methods and skills to complete tasks and address problems.
- equip learners with basic numeracy, academic and research skills in preparation for future undergraduate study.
- enable learners to take responsibility for initiating and completing tasks and procedures as well as exercising autonomy and judgement within limited parameters.
- reflect awareness of different perspectives or approaches when collaborating with others within an area of study or work.
- enable learners to develop a basic understanding across a range of management and technology disciplines.

At Levels 4-6 it will:

- Allow students to develop professional level skills and understanding across a range of computing disciplines.
- Develop independence in learning and encourage a commitment to lifelong learning.
- Encourage students to adopt problem-solving attitudes to their work.
- Provide opportunities for students to consider ethical issues relating to computing.

- Promote understanding of the key aspects of current practice in the field of computing while acknowledging current and emerging developments in related disciplines.
- Equip students with the essential skills and tools to work professionally in a computing situation and to be creative and professional practitioners when working independently and when collaborating with others as part of multidisciplinary teams.
- Enable students to communicate effectively through a variety of media and presentational forms to specialist and non-specialist audiences.
- Give students an appreciation of the continuing developments in computing and equip them to keep up to date with these developments.
- Provide a stimulating *online* academic environment in which students can develop confidence as practitioners and as individuals who are part of a highly engaged community of learners and thereby to inspire students to become lifelong learners.
- Enable students to work at an appropriate level in the development of web-based solutions.
- Develop independence in learning and encourage a commitment to lifelong learning.

11. Intended learning outcomes and the means by which they are achieved and demonstrated

11a. Knowledge and understanding

At Level 3:

With due regard to the QAA Recognition Scheme for Access to HE: The Access to Higher Education Diploma specification 2018, the intended programme learning outcomes are for students at Level are to:

A1/0 Use factual, procedural and theoretical understanding to complete tasks

At Levels 4-6:

A01 - Design, develop and evaluate web-based solutions using up to date tools and technologies.

A02 - Identify, explain and evaluate current and evolving trends, technologies and methodologies within Computing.

A03 - Systematically appraise relevant principles, theories and methodologies of systems design.

A04 - Critically evaluate relevant computer technologies to meet requirements in a range of novel or complex contexts.

A05 - Critically review current computer systems in light of recent developments in the field

Acquisition of knowledge and understanding (A1 - A5) at all levels is through a combination of online tutorials, group discussions and independent and directed study, supported throughout by comprehensive online teaching materials and broader resources. We achieve this through a pedagogy that includes assignment work, group forums and project-based activities.

11b. Intellectual (thinking), practical, affective and transferable skills

At Level 3

B1/0 Apply knowledge and understanding to basic, non-complex situations to solve problems.

At Levels 4-6:

B01 - Identify issues and formulate appropriate methods of investigation and evaluation.

B02 - Select and synthesise information from a variety of sources and utilise judgement to draw appropriate conclusions and make recommendations.

- B03 Utilise problem solving skills in order to create solutions to novel or complex problems in a variety of theoretical and practical situations.
- B04 Apply appropriate theoretical concepts and practical techniques in social, environmental and ethical issues to the solution of complex problems.
- B05 Synthesise and apply methodologies, techniques, tools and technologies from a range of fields within computing to provide complete solutions to novel or complex problems.

Intellectual skills (B1 – B5) are developed throughout the programme by the methods and strategies outlined in section 11a, above. Level 3

C1/0 Demonstrate a range of core academic skills to support study at undergraduate level.

C2/O Identify, access and evaluate a range of information sources for currency, scope and credibility.

At Levels 4-6:

- C01 Select and use appropriate combinations of hardware and software in order to create innovative solutions to a variety of theoretical and practical problems.
- C02 Select and apply appropriate methodologies and tools in the design of computer systems.
- CO3 Plan, design, develop and evaluate innovative computer-based solutions to a range of novel or complex problems using up to date tools and technologies.
- C04 Articulate reasoned technical and ethical evidence to justify solutions.
- C05 Demonstrate flexibility in adapting best practice solutions to different contexts.
- C06 Formulate research questions, deploy appropriate research methodologies and data collection methods and evaluate research findings examining practical, ethical and theoretical constraints.

Practical and professional skills (C1-C6) are employed in the production of solutions to real life situations developed through set scenarios, exercises and practical activities.

D1/0 Use effective written communication skills in a variety of tasks which are suitable for a specified audience.

At Levels 4-6:

- D01 Communicate effectively through appropriate media.
- D02 Critically evaluate information sources including academic sources, manufacturer information and Internet sources.
- D03 Work effectively on their own and demonstrate understanding of being part of a team, taking personal responsibility for their own efforts and outputs.
- D04 Manage time effectively by learning to plan and prioritise work in order to meet specified deadlines.
- D05 Learn independently in the spirit of critical and self-reflective enquiry.
- D06 Develop interpersonal skills of effective listening, negotiating, persuasion and presentation.

Transferable skills (D1 - D6) are developed throughout the programme. The skills of communication, critical use of source material including the Internet, and self-management (D1, D2, D3 and D4) are integral to coursework at all levels. Personal responsibility (D3, D4) becomes an increasingly important skill as students' progress, culminating in the final year project. As work becomes more complex at levels 5 and 6, students are tested on their abilities to respond positively to feedback from a variety of audiences, as well as to manage increasingly large workloads (D4, D5). Students are required to complete a number of assignments and a Computing Project in level 6 that reward independence, originality and critical enquiry, and which further enhances their communication and self-reflective skills. (D1 - D6)

12. Graduate Attributes and the means by which they are achieved and demonstrated

- E01 **Discipline Expertise:** Knowledge and understanding of Computing. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change.
- E02 **Effective Communication:** Communicate effectively both, verbally and in writing, using a range of media widely used in relevant professional context. Be IT, digitally and information literate.
- E03 **Responsible Global Citizenship:** Understand global issues and their place in a globalised economy, ethical decision-making and accountability. Adopt self-awareness, openness and sensitivity to diversity in culture.
- E04 **Professional Skills:** Perform effectively within the professional environment. Work within a team, demonstrating interpersonal skills such as effective listening, negotiating, persuading and presentation. Be flexible and adaptable to changes within the professional environment.
- E05 **Reflective Practitioner:** Undertake critical analysis and reach reasoned and evidenced decisions, contribute problem-solving skills to find and innovate in solutions.
- E06 **Lifelong Learning:** Manage employability, utilising the skills of personal development and planning in different contexts to contribute to society and the workplace.

13. Learning and teaching methods and strategies

Learning and teaching methods and strategies are delivered through a blended and integrated learning and teaching pedagogy that includes both asynchronous and synchronous activity.

For Online Learners:

Asynchronous

- Independent and directed student study, supported throughout by comprehensive online multi-media teaching materials and resources accesses through our Virtual Learning Environment
- Guided group / project-based work
- Research tasks
- Discussion forums where students discuss and critically engage with themes emerging from the online materials they engage with, following the posing of questions or propositions, case studies or similar by either tutor or students themselves.
- Podcasts and narrated PowerPoints

For Blended Learners:

Synchronous

- Face to face activity workshops and seminars where theory and practice are integrated.
- Independent and directed student study, supported throughout by comprehensive teaching materials and resources.
- Guided group / project-based work

Based upon the profile of our typical student profile, our strategy enables students to engage with a variety of learning tools that best meet their learning styles, overall objectives and personal circumstances. Developing independent study skills is the cornerstone of the learner experience, supported by peer engagement and engagement with the tutor and academic skills team. There is a requirement for written work at all levels including reports, essays, practical tasks, developed plans, timed examinations, portfolios of work etc., and our assessment policy informs how feedback is supplied by tutors at the formative and summative assessment stage.

14. Assessment methods and strategies

Intellectual skills are assessed through a combination of in-course formative exercises and summative assignments, including the submission of portfolios of work, complete design documentation and computer-based artefacts that demonstrate the skills required.

To support the development of practical skills, students must supply worked materials and evidence in support of their assignments. Critical reasoning, good presentation and sound evidence trails in all assignments are rewarded. Assessment briefs include a variety of contextual setting. Students receive feedback on all activities and assignments, this includes practical examples for improvement in the application of theory to practice to help them improve both aspects of their skill base.

To develop transferable skills all assignments must meet time deadlines. All assessed work must be submitted independently even where group activity has been an element of the process. Students must take responsibility for their own work. All assignments require students to adopt a spirit of critical enquiry and self-reflection which is rewarded in marking guides. All assessed work is expected to be presented in appropriate formats with structures and language that meets the needs of the intended audience. These guides are shared with students.

15. Employability

Virtually all online students on this programme are in employment. There are, however, an increasing number of younger undergraduate students joining the programme, many of whom may be in part time work. Blended students are more likely to have part time work and it is therefore important that there is support given to all students as regards career progression. In the first instance, as well as the subject knowledge and skills covered by the programme, this is achieved by the emphasis on transferrable skills across the programme that also allows students to develop a portfolio of evidence indicating how they have demonstrated a range of skills in different settings.

A University of Glasgow Report, 'Employers Perceptions of the Employability Skills of New Graduates' (2011)¹ identified commonly accepted desirable attributes of graduates:

- Team working (D3)
- Problem solving (B1-B5, C1-C3)
- Self-management (D3, D4)
- Knowledge of the subject (A1-A5)
- Literacy and numeracy relevant to the post (D1)
- ICT knowledge
- Good interpersonal and communication skills (C4, D1, D3)
- Ability to use own initiative but also to follow instructions (C5, D3, D4)
- Leadership skills (where necessary)

These attributes have been mapped against the Programme Learning Outcomes above and, of course, are reflective of the Graduate Attributes (E1-E6). The inclusion of the Arden values also provides students with the opportunity to develop a series of behaviours that are valued by employers and which will be evidenced through formative and summative assessment.

Arden University also uses the Abintegro platform to provide careers support. This allows a broad range of online tools to be made available to students including recorded sessions, a cv builder, simulated interviews and synchronous sessions on aspects of careers. Arden does not currently have a dedicated careers advisor but such an appointment is under consideration to support blended students.

16. Entry Requirements

- IELTS 6.0 (no less than 5.5 in any element) or equivalent for students whose medium of prior learning was not English.
- Candidates who demonstrate an ability to study the programme as evidenced through previous a personal statement (of between 350-500 words) or interview taking into account:
- their motivation for undertaking the programme
- relevant work experience
- prior qualifications
- references
